Workflow Automation using Deluge — Student Admission Enquiry Form

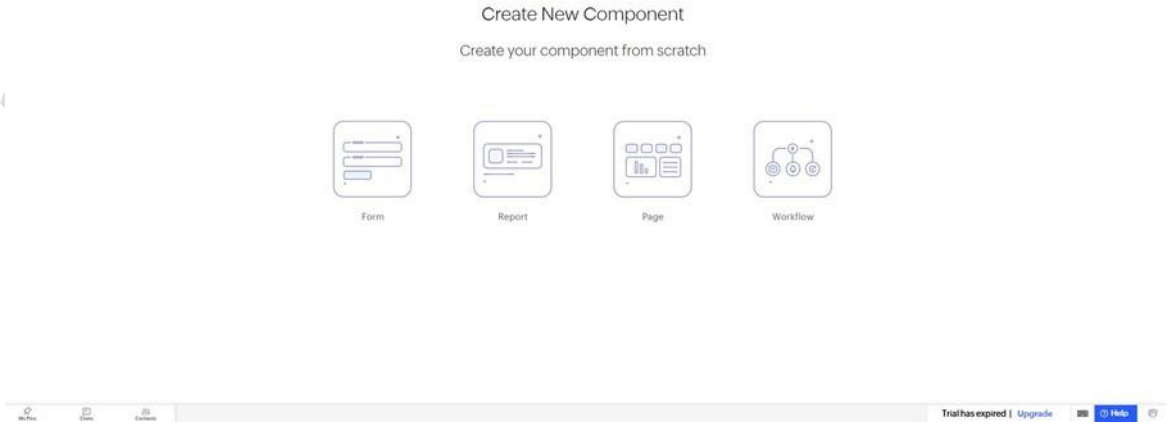

1. Aim

To automate the approval and notification process of the "Student Admission Enquiry Form" application in Zoho Creator using Deluge scripting, so that every admission enquiry submitted by a student is automatically routed for review, and the concerned student is notified by email the moment the application is approved or rejected — without any manual intervention from the admissions desk.

2. Procedure

2.1 Creating the Approval Workflow

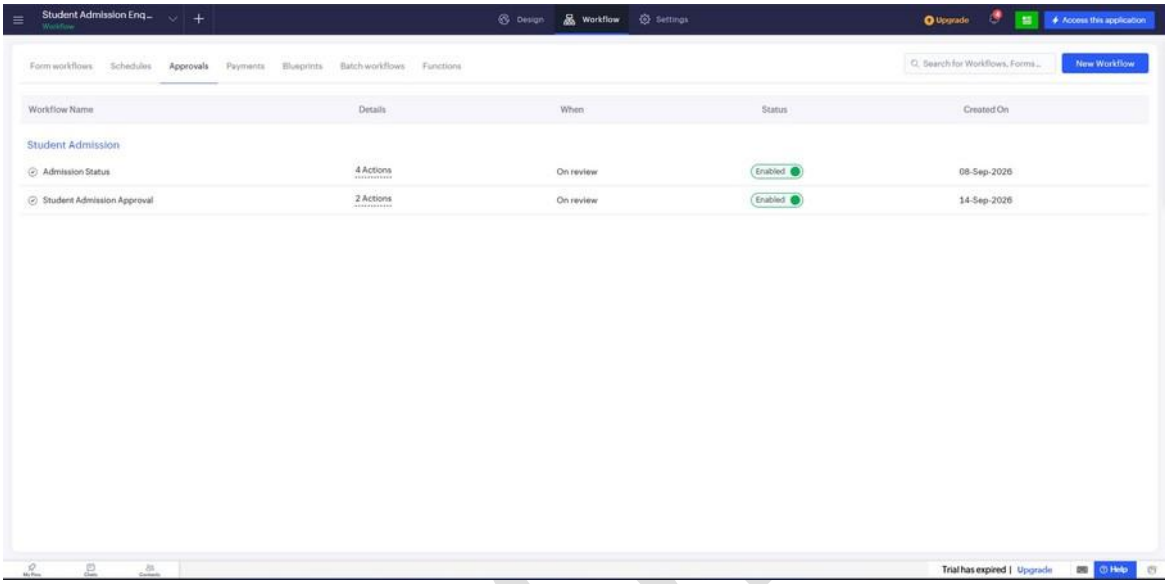

1. Open the Student Admission Enquiry Form application and click the "+" icon to open the Create New Component screen. Four component types are offered — Form, Report, Page, and Workflow — and Workflow is selected to begin building the automation.

Create New Component — Form, Report, Page, Workflow

Explanation: *This screen is the entry point for every new automation in Zoho Creator. Choosing "Workflow" here (rather than Form, Report, or Page) opens the workflow builder, where the trigger and the form it runs on are configured next.*

2. Inside the Workflow tab, the Approvals section is opened and the form "Student Admission" is chosen as the form the approval process must run on. Two workflows were configured against this form: "Admission Status" (4 Actions, triggered On review) and "Student Admission Approval" (2 Actions, triggered On review). Setting the process to run "Always" ensures every new enquiry automatically enters the approval chain, with no separate condition needed to activate it.

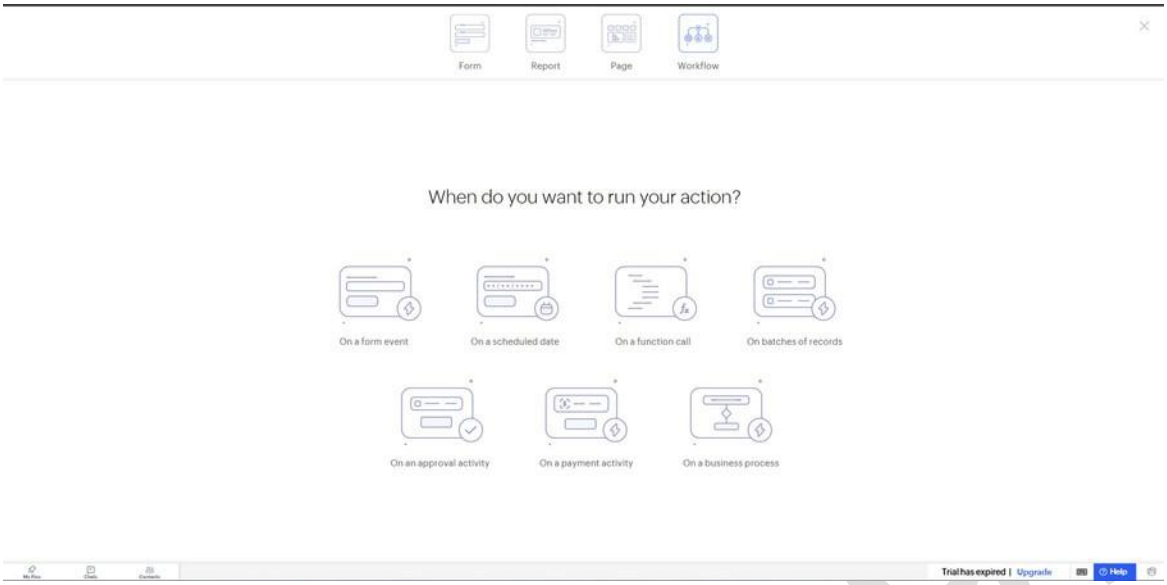

Approvals tab — "Admission Status" and "Student Admission Approval" workflows

Explanation: *This screen lists both approval workflows tied to the Student Admission form — Admission Status handling the broader status actions (4 Actions) and Student Admission Approval handling the core accept/reject decision (2 Actions). Both being Enabled confirms the automations are live and every submitted enquiry is pushed into review with no manual step needed to activate it.*

2.2 Choosing the Trigger and Writing the Deluge Script

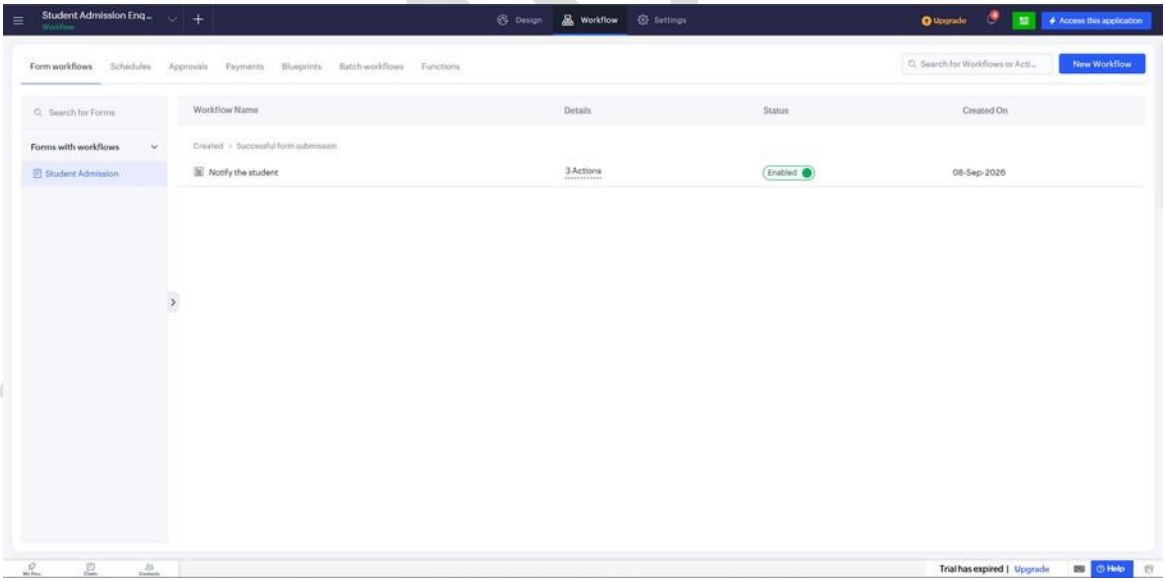

3. When adding a new action, Zoho Creator asks "When do you want to run your action?". The options available are On a form event, On a scheduled date, On a function call, On batches of records, On an approval activity, On a payment activity, and On a business process. For this automation, On an approval activity is selected so the script executes right after a request is approved or rejected.

Trigger selection — "When do you want to run your action?"

Explanation: *Each trigger type maps to a different real-world moment. Choosing "On an approval activity" ties the Deluge script directly to the outcome of the approval step (Approved / Rejected), instead of running on every save, which keeps notifications limited to genuine status changes.*

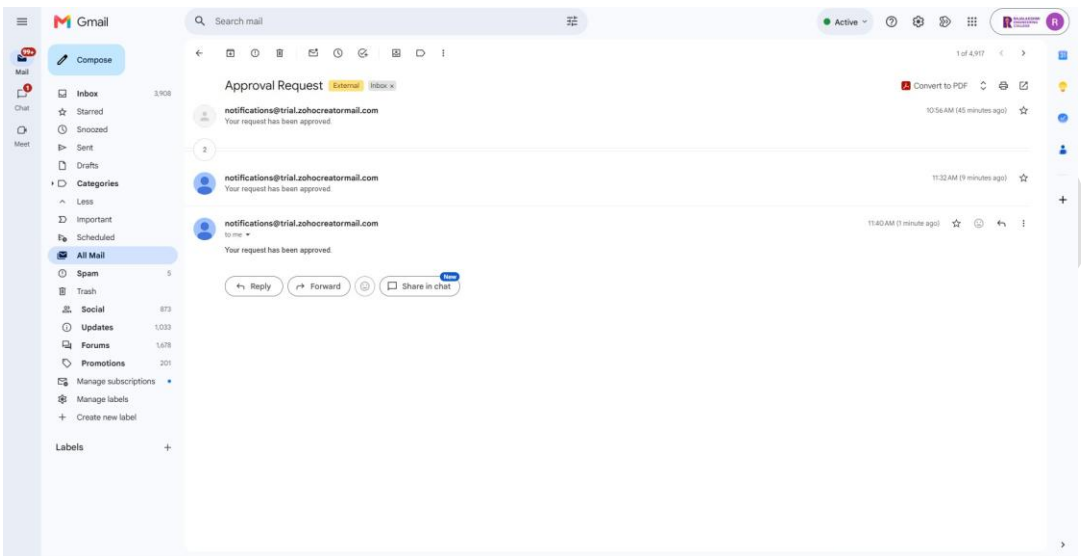

4. In parallel, a form-level workflow named "Notify the student" (3 Actions) is created under "Created > Successful form submission" so that the moment a new enquiry is submitted, an acknowledgement is sent automatically, independently of the approval chain.

Form workflows — "Notify the student" workflow on successful submission

2.3 Verifying Email Notifications

5. To confirm that the Deluge script correctly triggers a notification the moment a decision is recorded, the Gmail inbox linked to the workflow is checked. A series of "Approval Request" emails from notifications@trial.zohocreatormail.com are received in quick succession, each carrying the message "Your request has been approved," confirming that the approval-activity trigger fires the notification action every time a request is reviewed.

Gmail inbox — "Approval Request" notification emails triggered after approval

Explanation: *The repeated "Approval Request" emails, each sent within minutes of one another by the Zoho Creator mail service, show that the "On an approval activity" trigger configured in Section 2.2 fires reliably without any manual intervention. Every email is tagged External and lands directly in the Inbox, confirming that the notification action inside the Deluge script executes successfully each time an admission request is approved, completing the automated approval-and-notification loop described in the Aim.*

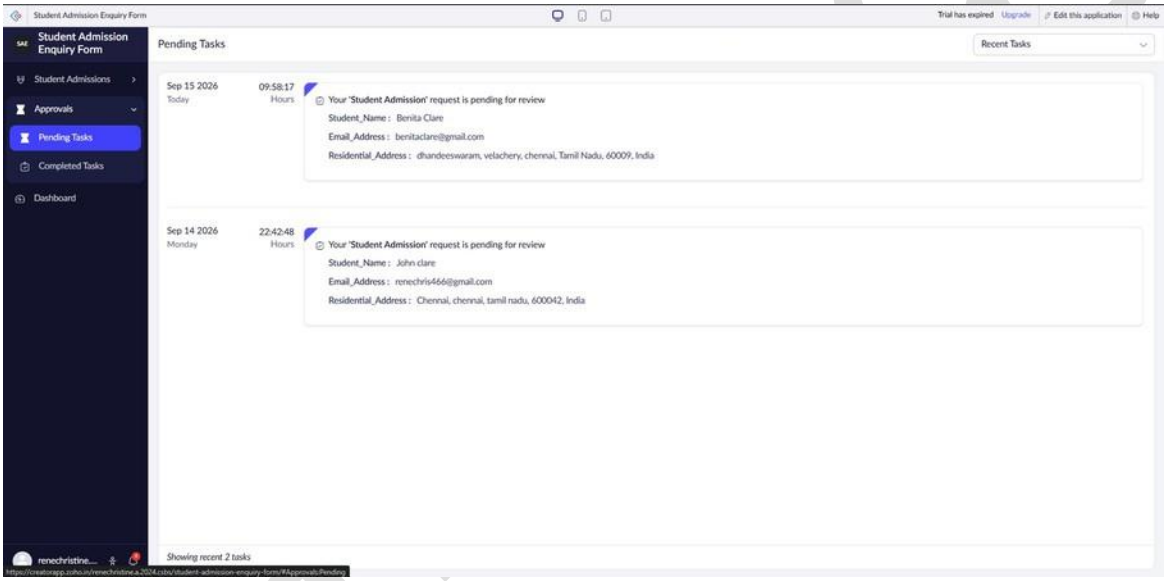

24140

Explanation: *This screen shows the Form workflows list for the Student Admission form. The "Notify the student" workflow runs on "Created > Successful form submission" and is Enabled with 3 Actions attached, confirming that every new admission enquiry triggers an automatic acknowledgement to the student without any manual intervention.*

3. Output

Once the approval workflow and its Deluge scripts were published, every admission enquiry submitted through the Student Admission Enquiry Form began flowing through the automated approval chain, with the reviewer able to track pending and completed reviews from dedicated tabs.

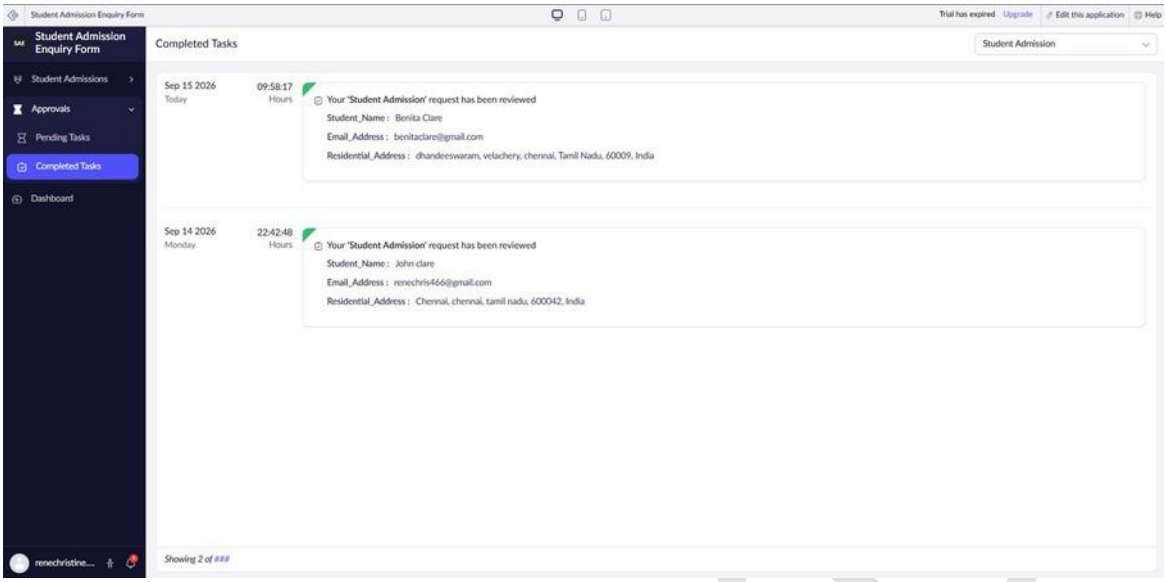

Pending Tasks

Pending Tasks — requests awaiting review

Explanation: *The "Pending Tasks" screen under Approvals lists every admission request still awaiting review — here requests from Benita Clare and John clare are shown, each with the student name, email address, and residential address that the Deluge script will use once a decision is made, confirming that new submissions are correctly queued for approval.*

Completed Tasks

Completed Tasks — requests after review

Explanation: *The "Completed Tasks" screen shows the same two requests after a reviewer has acted on them — both marked as reviewed. This confirms that the approval workflow executed correctly, moving each record out of Pending Tasks and triggering the corresponding notification automatically.*

4. Result

An approval-driven workflow automation was successfully built for the "Student Admission Enquiry Form" application using Deluge scripting in Zoho Creator. Every new admission enquiry is automatically queued for review, and Deluge scripts attached to the approval workflows automatically notify the student and keep the admissions team informed in real time about the status of each request.
