Student Admission Enquiry Form

Building Reports, Dashboards, and Custom Pages (UI Builder)

Experiment No: 5

Name: Shrivarhinee K

Roll No: 241401099

Department:Computer Science and Business Systems

1. Aim

To design and build a functional “Student Admission Enquiry Form” application in Zoho Creator that demonstrates the correct usage of all thirteen Basic Fields available in the Form Builder, while solving a real institutional requirement of capturing structured student admission enquiries. The project also involves building supporting Reports and a UI Builder Dashboard Page so that an admissions officer can view, filter, and track submitted enquiries, and monitor course-wise and date-wise admission trends from a single unified screen.

2. Procedure

2.1 Building the Form

A new application, “Student Admission Enquiry Form”, was created in Zoho Creator. The Student Admission form was built using all thirteen Basic Fields from the Form Builder — Single Line, Multi Line, Email, Phone Number, Number, Decimal, Currency, Date, Date-Time, Checkbox, Dropdown, Radio, and URL/Link — to capture fields such as Student Name, Email Address, Residential Address, Contact Number, Guardian Name, Date of Birth, Gender, Course applied for, Class XII Percentage, and Additional Remarks.

2.2 Building the Reports

1. Open Reports in the left sidebar; Zoho Creator auto-generates a grid report from the form. Rename it “All Student Admissions”, listing student name, email address, residential address, contact number, guardian name, additional remarks, and Class XII percentage for every enquiry.

2. Create a second report, group it by the Course field, and name it “course report” so enquiries are organized into B.Tech – AI & Data Science, B.Tech – Computer Science & Engineering, M.Tech – AI & Data Analytics, and MCA – Data Science & Software Development columns, making it easy to see which courses are receiving the most enquiries.

3. Create a third report, “Student Admission Summary”, that consolidates student name, email address, residential address, contact number, guardian name, and additional remarks into a single scrollable table for the admissions officer to review at a glance.

2.3 Building the Dashboard Page (UI Builder)

1. Go to Pages under UI Builder → click New Page → choose Blank Page → name it “dashboard.”

241401099

2. Add a summary tile titled “Student Admission” showing the total number of admission enquiries received, along with an “Update Details” button.

3. Add a “Course Completion by Department” component listing the Gender field (Female/Male) counts, so the admissions officer can gauge the applicant profile at a glance.

4. Add a Chart Component plotting Date_Of_Birth as a bar chart, so date-of-birth distribution across the enquiries can be tracked.

5. Drag in an “All Student Admissions” button/link so every enquiry record is reachable directly from the dashboard.

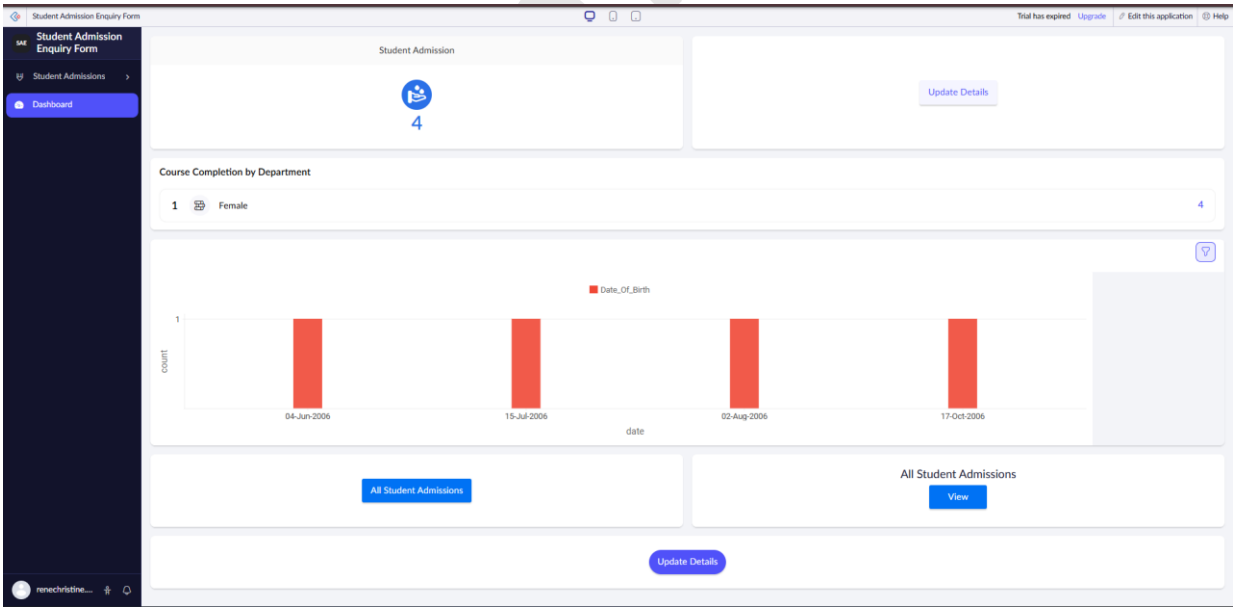

6. Arrange the layout top to bottom: Student Admission count and Update Details → Course Completion by Department → Date_Of_Birth bar chart → All Student Admissions link.

7. Preview the page to confirm the report loads with the correct counts, the chart renders correctly, and each report link opens the right view.

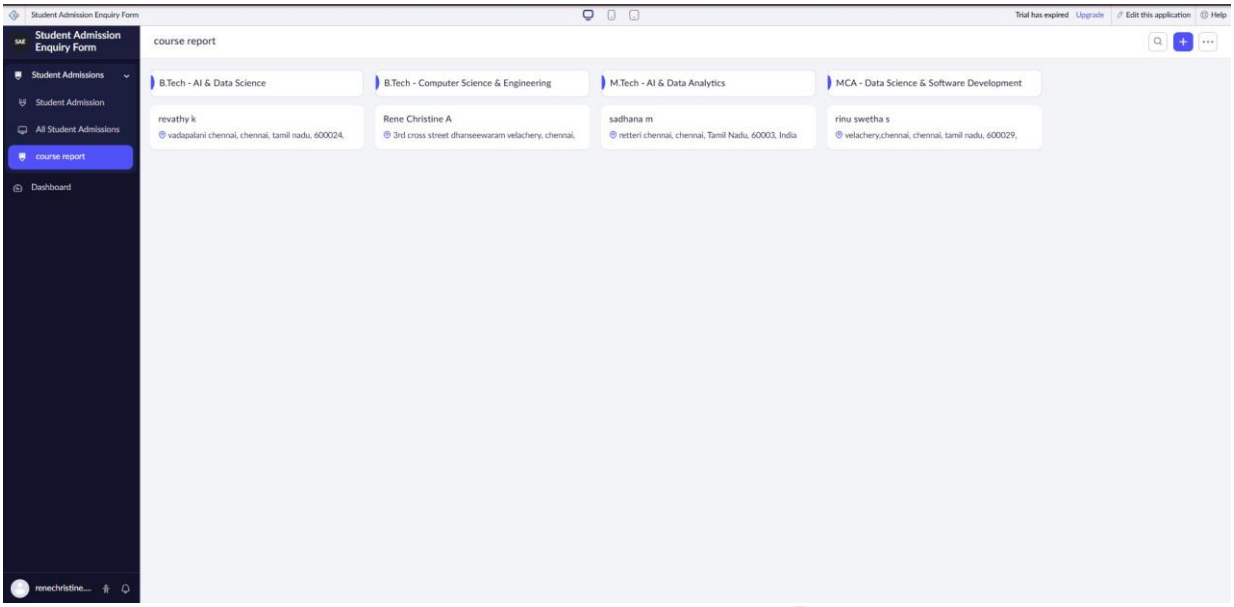

8. Check Form, Report, and Page permissions under Settings for each user role, ensuring the intended roles have View/Add access.

9. Publish the page and, if required, set “dashboard” as the default landing page under App Settings → Pages.

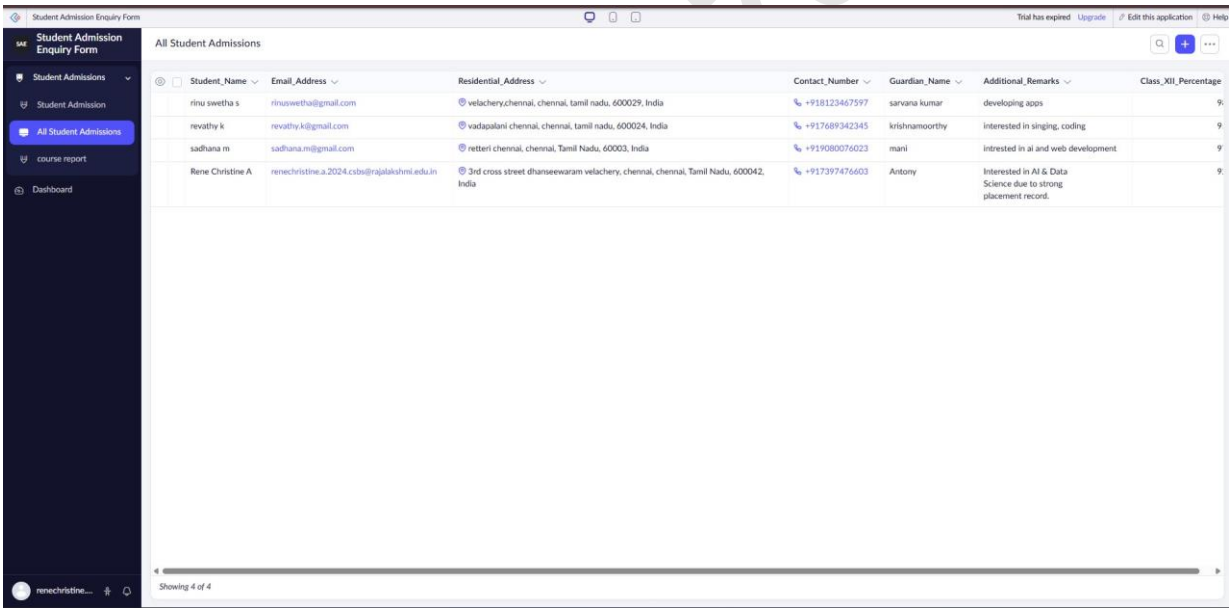

3. Output

dashboard – Student Admission count, Course Completion by Department, and Date_Of_Birth chart

course report – student admission enquiries grouped by B.Tech – AI & Data Science, B.Tech – Computer Science & Engineering, M.Tech – AI & Data Analytics, and MCA – Data Science & Software Development

All Student Admissions – consolidated view of student name, email address, residential address, contact number, guardian name, additional remarks, and Class XII percentage

4. Result

An “All Student Admissions” report, a “course report” grouped by course, and a consolidated “dashboard” page were built using UI Builder for the Student Admission Enquiry Form application, built with all thirteen Basic Fields of the Form Builder. This enables the admissions officer to view enquiry patterns at a glance, track applicant gender distribution and date of birth trends, and review every admission enquiry from a single unified screen, ensuring each student admission enquiry is captured as a structured, trackable digital record.
