AIM

To deploy and migrate a Zoho Creator application (**Student Admission Enquiry Form**) across the Development, Stage and Production environments using the Environments feature, and to publish a new version (V3.0) of the application from Stage to Production without affecting the live users.

PROCEDURE

Step 1: Open the Environments page

Log in to Zoho Creator and click **Environments** under the **DEPLOY** section in the left menu. The page shows two columns, **Stage** and **Production**. The *Student Admission Enquiry Form* application is already deployed, and both columns show **Version 2.0** dated Oct 06, 2026. The status **Changes available** below the application name means the Development copy has changes that have not yet been published to the environments.

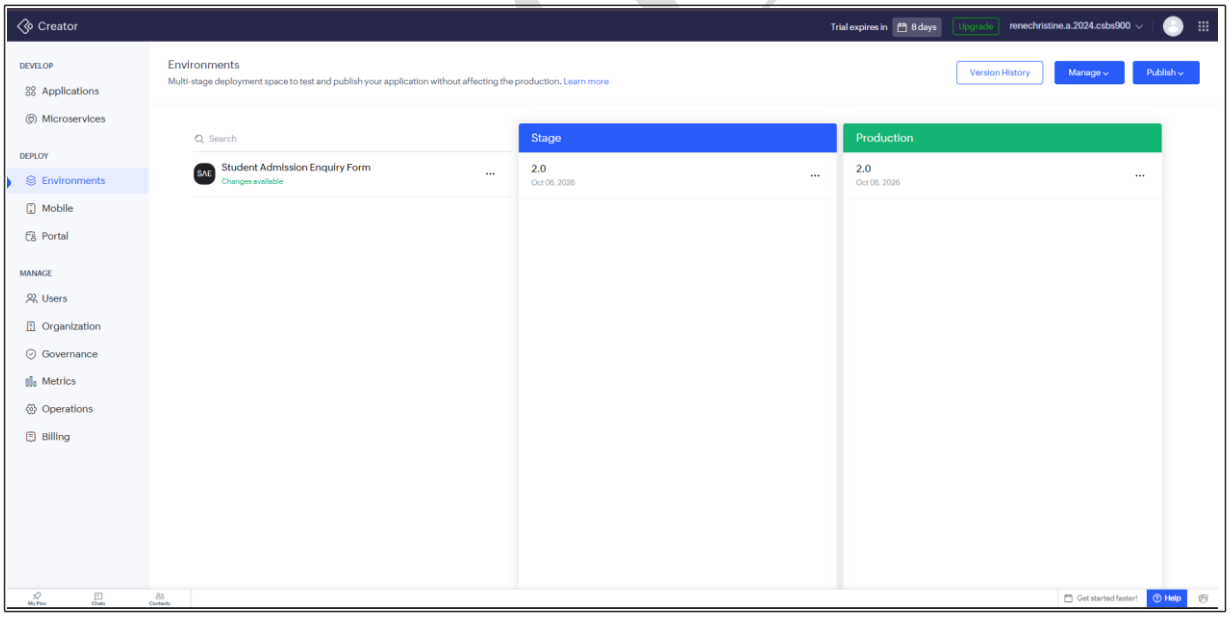

Fig. 1: Environments page showing Version 2.0 in both Stage and Production

Step 2: Make changes in the Development environment

Go to **Applications** under the **DEVELOP** section on the home page. The *Student Admission Enquiry Form* application card (created on Sep 29, 2026) has an **Environment** drop-down that lists the options for each environment. Choose **Edit** under **Development** and make the required improvements and workflow changes to the application (new fields, modified workflow, etc.). These changes are visible only to the developer until they are published.

Step 3: Publish the changes to the Stage environment

Open the **Environments** page, click **Publish** and choose **Publish to Stage**. The *Staging – Publish to Stage Environment* window opens. Fill in the **Title** (name of the version), **Description** (what has changed), **Type** (*Major* for enhancements and updates, *Minor* for minimal changes and bug fixes) and the **Email Notification** address. The right side shows the **Application Versions** table, where the version changes from **V2.0 to V3.0**. A warning states that the application will be in maintenance mode until the publish is complete. Click **Publish**.

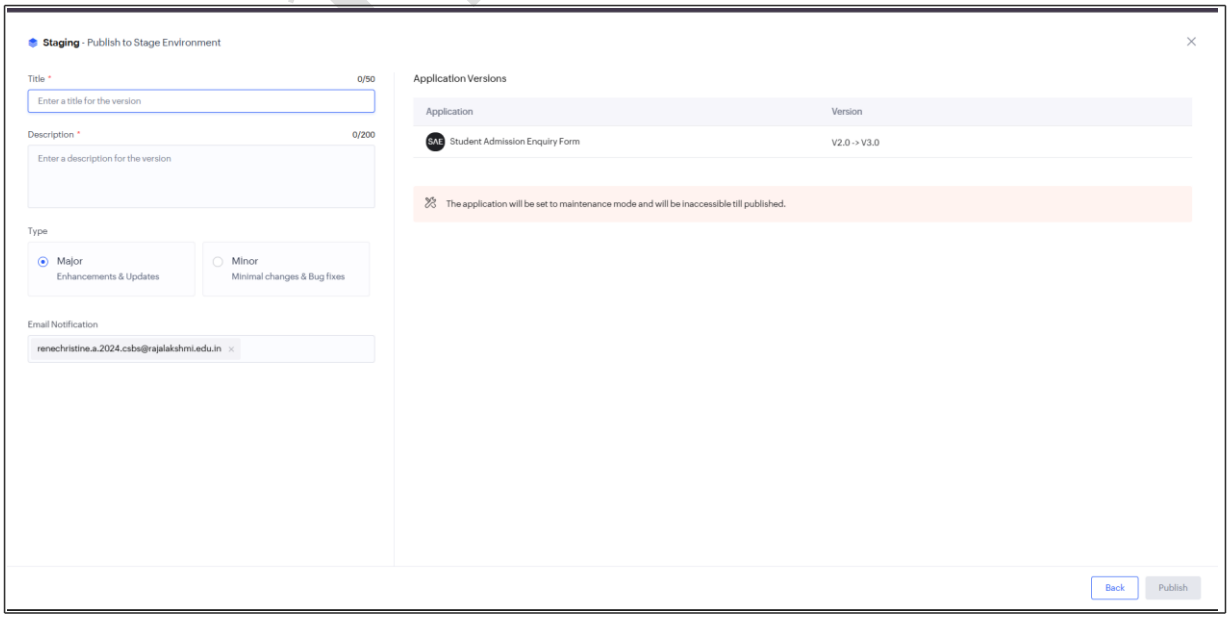

Fig. 3: Publish to Stage Environment dialog (V2.0 → V3.0)

Step 4: Verify the new version in Stage

After the publish to Stage completes, the Environments page shows **Version 3.0** in the **Stage** column while **Production** still shows **Version 2.0**. The application status appears as **Locked** while the version is held for testing and migration. The application is tested in Stage at this point, and the live users are not affected.

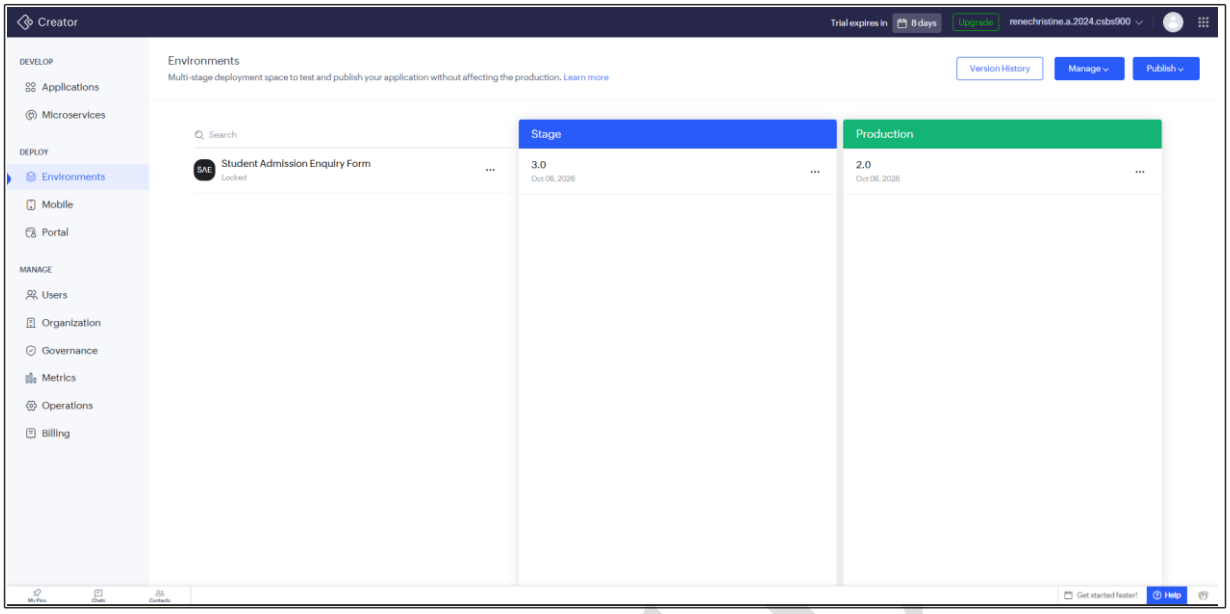

Fig. 4: Stage has Version 3.0, Production still has Version 2.0

Step 5: Publish (migrate) to the Production environment

Click **Publish** and select **Publish to Production**. The *Version – Publish to Production Environment* window opens. Under **Publishing Options**, **Publish Now** starts the process immediately, while **Publish Later** schedules it for a chosen date, time and time zone (GMT+05:30 Chennai, Kolkata). Enter the e-mail address in **Send Mail Notification**. The **Selected Versions** table shows the version title *version 3*, the application version *Student Admission Enquiry Form - V3.0* and its description. Click **Publish**; the application stays in maintenance mode until the publish finishes.

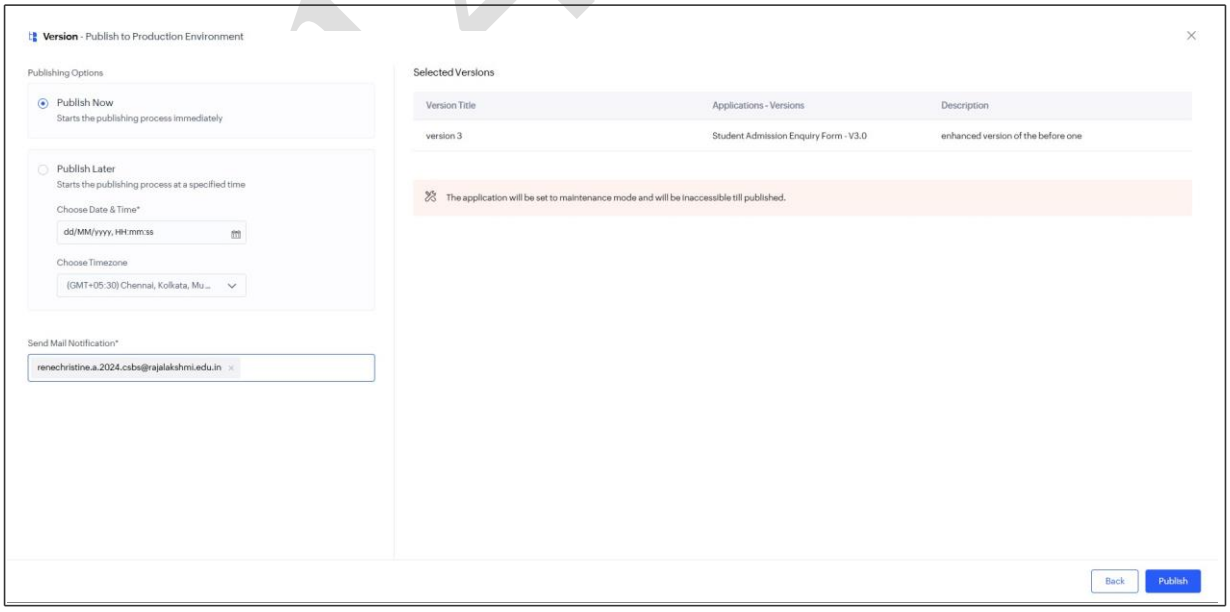

Fig. 5: Publish to Production Environment dialog (Publish Now selected)

Step 6: Publish to Production initiated

A confirmation screen *"Publish to Production initiated"* appears. The publish takes a few minutes; the progress can be tracked on the Environments page and an email is sent when it completes. Click **Go to Environments**.

OUTPUT

After the Production publish is completed, the Environments page shows the final deployed state of the application.

Output 1: Before migration to Production

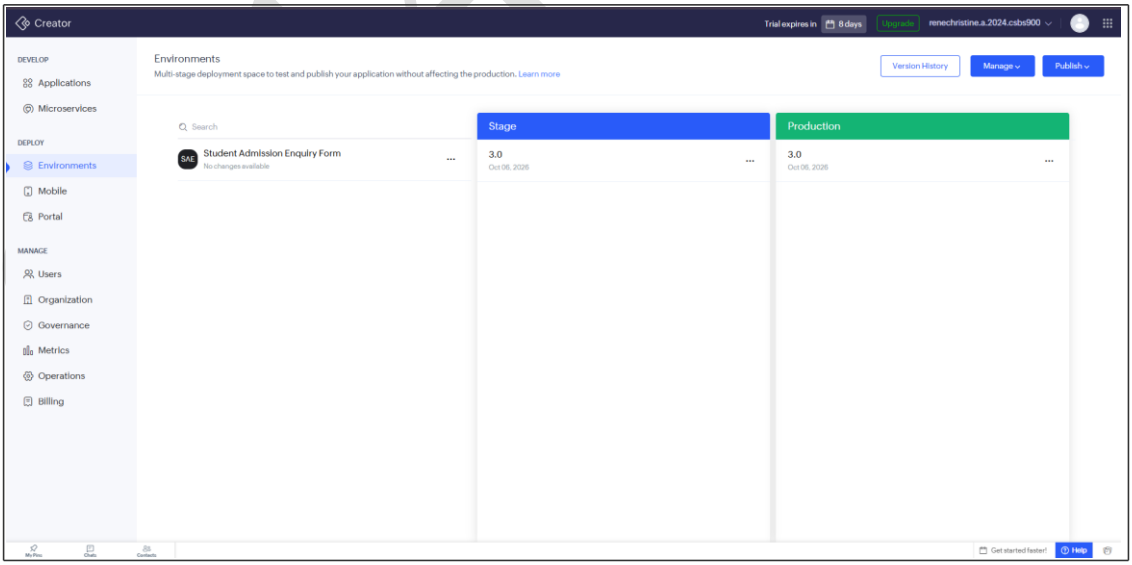

Stage contains **V3.0** (tested version) whereas Production still runs **V2.0**. This confirms that the new changes were first isolated in Stage.

Output 1: Stage = 3.0, Production = 2.0

Output 2: After migration to Production

Both the **Stage** and **Production** columns now display **Version 3.0** dated Oct 06, 2026, and the status shows **No changes available**. This shows that the updated Student Admission Enquiry Form (with improvements and workflow changes) was successfully migrated from Stage to Production and is now available to the end users.

Output 2: Stage = 3.0, Production = 3.0

RESULT

Thus, the Student Admission Enquiry Form application was successfully deployed and migrated in Zoho Creator. The changes made in the Development environment were published to Stage as Version 3.0 after testing, and finally Version 3.0 was published to the Production environment using the Environments feature, replacing Version 2.0 without affecting the live users.
